

NO FIXER CAN DO..

PRIMUS CHEMICAL'S MONTHLY NEWSLETTER

Primusinks Add. Xlinker TS-750

WORDS: SAM CHUNG

In old school way, foil press or flock static process is always bothering if you want to do more fancy prints on t-shirt, for example, patch print with rubberized ink. Making a topcoat with a kind of "releasing paste or so-called anti-staining ink" is always the way to get rid of foil or flock pollution.

Now Primus offers a unique **fixing agent** to be added with rubberized ink and that makes printers easier to save an additional topcoat.

Xlinker TS-750 makes it happen.

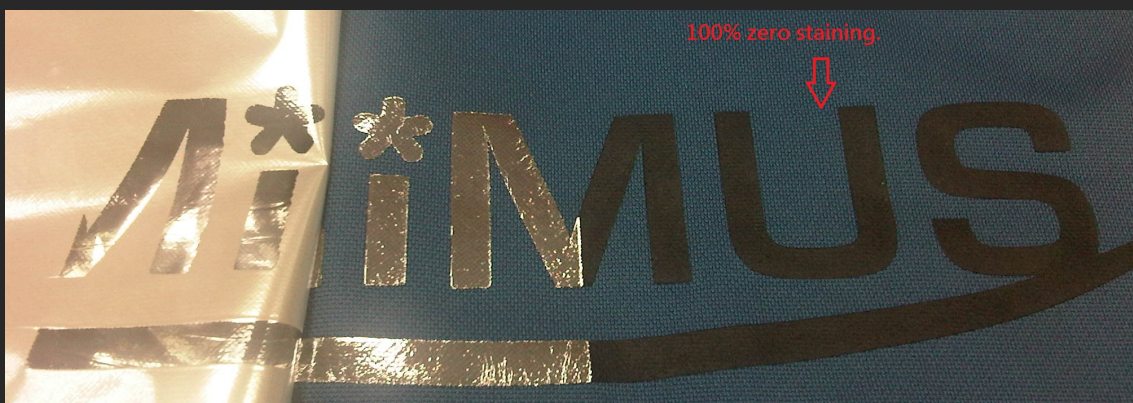

**This month,
we're looking at:**

*An Anti-staining Fixer
for foil & flocks press*

Just little dosage to achieve

TIPS TO GO

- 2-3% Xlinker TS-750
- stir well before print
- pot life up to 6 hours
- curing: 150C x 2 mins before press

“With just a few simple solutions, you can save money on repairs and replacements!”
